

## Features

### Groundbreaking design and engineering

*Wind-tunnel designed.* Chrysler tested several variations in a special wind tunnel built with the help of the Wright brothers.

*Steel bridgework body structure* including roof framing.

*Hydraulic brakes*

*Overdrive transmission*

*Contemporary, almost radical styling*

*Six and eight-cylinder engines*

*Floating Power™ engine mounting:* cushioned motor mounts are over the front axle, not behind it

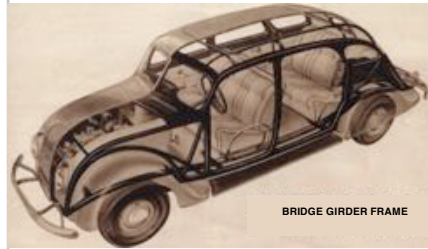

*Dynamic Balance™ design:* seats are cradled between the front and rear axles

*Wide seats.* Front and rear seats are wide enough for three

*Perfect ventilation system*

# What is that?

## The Chrysler and DeSoto Airflows

In 1934, Chrysler Corporation introduced the first streamlined, all-steel-bodied production cars in its DeSoto and Chrysler divisions. Production continued through 1936 (DeSoto) and 1937 (Chrysler) to a total of about 55,000 units. The low sales count makes these innovative cars rare today.

## Membership Application

**DUES\*** (please check one)

Airflow ownership is not a requirement for membership

- \$30 U.S. per year **Individual or Joint Membership**     \$35 per year in U.S. Dollars **outside of North America**
